Current Status of the Claims

This listing of claims will replace all prior versions, and listings, of claims in the

application:

1. (original) Folding roller used in converting machines of paper or similar products, said

machines comprising a first and a second counter rotating folding roller having a substantially

cylindrical body and a plurality of folding means, wherein said first and second folding roller

interact at a contact line for making in a folding area downstream said contact line a stack of

folded and/or interfolded sheets characterised in that at least one support is provided for each of

said folding rollers spaced from said contact line and in order not to impede folding operations in

said folding area.

2. (original) Folding roller, according to claim 1, wherein between said support and said

folding roller a bearing is provided suitable for allowing a free rotation of said folding roller with

respect to said support.

3. (original) Folding roller, according to claim 1, wherein said at least one support holds said

folding roller at a portion not occupied by folding rings of said folding roller.

4. (original) Folding roller, according to claim 1, wherein said folding roller comprises at least

a first and a second cylindrical body operatively connected at an end so that they can rotate

integrally.

5. (original) Folding roller, according to claim 4, wherein said support and the relative bearing

are arranged at said ends operatively connected.

Attorney Docket No. AGZP:115US U.S. Patent Application No. 10/709,189 Reply to Office Action of September 8, 2004

Date: January 5, 2005

6. (withdrawn) Method to obtain folded and/or interfolded sheets of paper and similar products by feeding and moving a sheet or web of paper or similar products in a folding and/or interfolding machine up a couple of folding counter rotating rollers, said rollers being suitable for cooperating at a contact line for making a stack of interfolded and/or folded sheets in a folding area located downstream of said contact line characterised in that said folding rollers are held by a support spaced from said contact line without impeding folding operations in said folding area.
